

## WATCHMAN™ SELECT

WATCHMAN Select is a machine condition monitoring service program that provides predictive monitoring coverage for smaller plants or enterprises with 15-150 machine assets.

### PROGRAM OVERVIEW

WATCHMAN Select is designed for companies who struggle to meet compliance obligations and maintenance planning budgets and whose downtime costs or penalties approach \$50K per hour or more.

This program provides the essential elements of a condition based maintenance program. Program activities are overseen by Azima DLI program management staff and implemented by expert vibration analysts.

All WATCHMAN service programs include unlimited subscription seats to the WATCHMAN Reliability Portal™, a secure web interface providing access and automated alerts for all of your monitored assets including history trends, statistics, and reports. Machine health information is widely available to all decision makers in your company through the WATCHMAN Portal.

As an added value, WATCHMAN Select customers will receive limited access to Azima DLI's condition

monitoring e-Learning system and have unlimited access to our analysis and technical support staff.

Optional technologies and services such as IR thermography, oil analysis, motor testing, battery testing, reciprocating engine and compressor analysis, consulting, and training can be added to the Select plan.
